Foundation

1995 as a joint stock company

Management Board

Sadık Saraç, Günter Saraç

Alarming/Alerting	System solution (software and hardware) for monitoring, recording, automated processing, and logging security-related events regardless of location and source. Alarms are recorded via potential-free contacts, external control systems and telephone calls and, depending on requirements and with different priorities, transmitted to the recipient via SMS, telephone call, e-mail, fax, internal or external paging or forwarded in plain text to cordless DECT/Wi-Fi end devices (integration with various TVA)
Communication	System solutions (software and hardware) to not only automate but also rationalize telephone traffic. Standalone voicemail systems up to multi-client capable, decentralized, browser based IVR systems
Integration	Expansion of our own solutions with customer-specific database applications (CTI)
Services	Consulting, concept creation, standard solutions and customer-specific in-house developments, project planning and commissioning of turnkey solutions (fixed price, in time), training, support and maintenance
