Lone worker protection

Occupational safety for lone worker is an important topic. An alarm, which can be triggered either consciously or unconsciously, can save lives. The personal-emergency signal device can send a wide range of configurable information to the cloud alarm server using the 2G GSM signal. Various parameters show to the control centre where the person is located. In the event of an alarm, an automatic voice connection can be established to the alarm server via the local mobile phone network and various localisation information (indoor/outdoor) can be transmitted. Additional safety functions such as heartbeat (sign of life) complement the solution.

Features – GSM S EX PLUS

- Emergency call with red button (pressure alarm)
