ESPA Multiplexer

The Issue

Would you like to increase security but find yourself limited by the existing infrastructure? Or does upgrading the current alerting system require considerable investments in costly hardware due to a lack of interfaces? Are you looking for a multiplexer to transmit multiple ESPA interfaces to just one ESPA 4.4.4 input?

The Solution

The ESPA Multiplexer by ATT acts as a type of concentrator to allow multiple existing ESPA interfaces to be transmitted to a single ESPA 4.4.4 input. Where all the individual systems transmit data in the same manner and information is analysed by the same set of rules. This not only spares you complex installations but depending on the situation also expensive upgrades of the existing hardware infrastructure. The Multiplexer further more offers an integrated WEB emergency call for notifying medical alarms.

Pictorial Schematic

Additional Information

Alerting solutions by ATT are being used by countless satisfied customers. The ESPA Multiplexer was developed based on customer requests and has repeatedly been field tested successfully. Among others, well-known state hospitals are utilising this system to reliably process and notify nurse call events.

Please contact the ATT AG experts for additional information. Inquire about the ideal solution for your needs.
